

## CLEANING TO PROTECT HEALTH

“Does Your Current Cleaning Company Protect You?”

As a janitorial company that cleans over 500,000 square feet per night in healthcare settings, we decided to take our cleaning procedures to the next level. The first priority of nearly all cleaning companies is the protection of facility image. This is a high priority at 360clean, but in a healthcare setting our priorities change. The first priority is Infection Control and by doing this the protection of the facility image is obtained at a much higher level.

This is accomplished through our JaniMed cleaning system. The JaniMed system utilizes cleaning chemicals and procedures that protect the health of your patients and employees.

The system is not expensive and may cost no more than your current cleaning service. If you would like to schedule a free facility analysis, please call today! We would be happy to look over your facility and show you what 360clean and the JaniMed cleaning system can do to protect your facility...but more importantly what JaniMed can do to protect your employees and customers.

### Cleaning Facts

- Most companies do not train their employees to prevent cross-contamination.
- Only Non-Disinfecting chemicals are used by many cleaning companies.
- Cleaning with the goal of Infection Control can be a cost savings for your healthcare practice or business.
